

## Problem A. Battle in Two Pairs of Heroes

In the game of Warcraft, Alice has two heroes  $A_1$  and  $A_2$ , and Bob has two heroes  $B_1$  and  $B_2$ . The health points of  $A_1$  and  $A_2$  (resp.  $B_1$  and  $B_2$ ) are  $a_1$  and  $a_2$  (resp.  $b_1$  and  $b_2$ ) respectively. The heroes with positive health points are surviving, and the heroes with zero or negative health points are dead. The goal of the game is to kill both of the opponent's heroes.

Alice and Bob take turns to move. In Alice's turn, if  $A_1$  (resp.  $A_2$ ) is surviving, then  $A_1$  (resp.  $A_2$ ) can decrease  $B_1$ 's health points by  $a_{11}$  (resp.  $a_{21}$ ), or decrease  $B_2$ 's health points by  $a_{12}$  (resp.  $a_{22}$ ). If both  $A_1$  and  $A_2$  are surviving, then there are 4 possible actions in Alice's turn:

- Decrease  $B_1$ 's health points by  $a_{11} + a_{21}$ ;
- Decrease  $B_2$ 's health points by  $a_{12} + a_{22}$ ;
- Decrease  $B_1$ 's health points by  $a_{11}$  and decrease  $B_2$ 's health points by  $a_{22}$ ;
- Decrease  $B_1$ 's health points by  $a_{21}$  and decrease  $B_2$ 's health points by  $a_{12}$ .

Similarly, in Bob's turn, if  $B_1$  (resp.  $B_2$ ) is surviving, then  $B_1$  (resp.  $B_2$ ) can decrease  $A_1$ 's health points by  $b_{11}$  (resp.  $b_{21}$ ), or decrease  $A_2$ 's health points by  $b_{12}$  (resp.  $b_{22}$ ). If both  $B_1$  and  $B_2$  are surviving, then there are 4 possible actions in Bob's turn:

- Decrease  $A_1$ 's health points by  $b_{11} + b_{21}$ ;
- Decrease  $A_2$ 's health points by  $b_{12} + b_{22}$ ;
- Decrease  $A_1$ 's health points by  $b_{11}$  and decrease  $A_2$ 's health points by  $b_{22}$ ;
- Decrease  $A_1$ 's health points by  $b_{21}$  and decrease  $A_2$ 's health points by  $b_{12}$ .

Both player play optimally. Your task is to find out the winner of the game.

### Input

The first line is the number of test cases up to 40.

For each test case, there is a line containing 12 integers  $a_1, a_2, b_1, b_2, a_{11}, a_{12}, a_{21}, a_{22}, b_{11}, b_{12}, b_{21}$  and  $b_{22}$ . All the integers are positive and less than 100.

### Output

For each test case, if Alice has a winning strategy even if Bob moves first, then output "Alice wins"; if Bob has a winning strategy even if Alice moves first, then output "Bob wins"; if the player who moves first has a winning strategy, then output "It depends".

### Sample

3	It depends
3 3 3 8 1 2 2 1 2 1 1 2	Alice wins
4 10 10 4 1 2 2 1 2 1 1 2	Bob wins
5 12 12 5 2 1 1 2 1 2 2 1
