

# Hissing Microphone

Time Limit: 1 second

A known problem with some microphones is the “hissing s”. That is, sometimes the sound of the letter s is particularly pronounced; it stands out from the rest of the word in an unpleasant way.

Of particular annoyance are words that contain the letter s twice in a row. Words like `amiss`, `kiss`, `mississippi` and even `hiss` itself.

## Input

The input contains a single string on a single line. This string consists of only lowercase letters (no spaces) and has between 1 and 30 characters.

## Output

Output a single line. If the input string contains two consecutive occurrences of the letter s, then output `hiss`. Otherwise, output `no hiss`.

### Sample Input 1

<code>amiss</code>	<code>hiss</code>
--------------------	-------------------

### Sample Output 1

### Sample Input 2

<code>octopuses</code>	<code>no hiss</code>
------------------------	----------------------

### Sample Output 2

### Sample Input 3

<code>hiss</code>	<code>hiss</code>
-------------------	-------------------

### Sample Output 3
